

### CHAIN LINK FENCING ON STRUCTURES

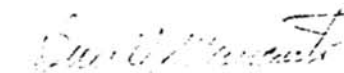

Chain link fencing material added to existing railing should be placed on outside of the posts. The posts should be placed in such a manner that no walkable surface is outside the posts.

However, this may not be possible to do with all Protective Fencing details. Other means may be needed to decrease the walkable surface area outside the railing.

The Railings, Barriers and Sound Walls Technical Specialist should be contacted for details not in Section 20 of the *Bridge Design Details* manual.
